Let us re-visit another important bit.

## Hourly Pay Selector

In this view you can enter:

- your working day hours;
- your hourly rate;
- the length of your shift; and
- your weekend rate.

Also if you do shift work, i.e. your shifts start and end at different times during the month, you can:

- set your shift hours;
- Enter the different rates your shifts pay:  
and
- enter the length of your shifts.

Let's take a look at the simple hourly pay selector. We have already populated it with information.

With this information the pay calculator can work out your earnings without you trying to do it. All you need do on the Calendar, is enter your start and finish times.

Now, Let's take a look at where you may work shifts and have different hourly pay rates.

We need to let the system know, so to activate this mode we need to click the Advanced  at the bottom of the Hourly Pay Selector panel.

This allow for far more options as the next two screens will show.

## Saved options

When you save a simple or advanced Hourly Pay Selector, it becomes the active calculator for any data entered into the Timesheets.

These entries can be historical or present day, and changing the Hourly Pay Selector won't affect any information you have posted already.

An Active sign will appear on the Hourly Pay Selector currently in use.
